# Household appliances

**A part of everyday life - The next generation of household appliances**

Not only are the numerous "kitchen helpers" a firmly established part of everyday life, the same is true of the highly innovative products from ebmpapst that are found in almost all household appliances.

Motors, fans and blowers from ebmpapst ensure that everything goes smoothly in the kitchen while using the least amount of energy possible. That they do so with the highest level of performance is understood. Leading household appliance manufacturers have long been convinced of our quality and have used our products with great success for years.

**Applications**

# Range hoods

## The blower - the heart of a range hood

increasing our quality of life. Particularly in locations where the culinary arts have an effect on room air conditions, ebm-papst blowers provide the necessary movement of air.

Like the filter, in these applications the blower is an essential component of the range hood, ensuring that modern kitchens have pleasant room air conditions free of unwanted odors, grease and steam.

The compact design of ebm-papst blowers makes installing them as easy as can be. They have perfect noise behavior, even at high air performance levels that can be adjusted individually ..

As a highly competent development partner, we work side-by-side with our customers from the beginning and share our expertise; together, we bring competitive and innovative products to the market.

# Dishwashers

## Active drying with blowers from ebm-papst

Today, most households depend on washing machines to wash and dry their dishes. In addition to good cleaning performance, it is important that these machines provide uniform, spot-free drying.

ebm-papst blowers are developed specifically for each appliance produced by a manufacturer. They allow an active drying process that is safe for the dishes and will not cause drops to form.

As a development partner and series supplier for all major household appliance manufacturers, we are setting the technological trends of the future.

# Commercial and industrial kitchen equipment

## In catering and food service

In the area of commercial and industrial kitchen technology, in addition to implementing customer-specific applications, we offer a wide variety of solutions for equipment such as:

- Steamers
- Commercial dishwashers
- Holding cabinets
- Cutting machines
- Juice presses
- Beverage ancillary cooling

# Ovens

## Much more than hot air

ebm-papst recirculating blowers are used in hot-air ovens in both domestic and commercial environments. They provide exceptionally high performance that is both quiet and energy-efficient. ebm-papst offers fans and blowers that are individually and specially matched to ovens of all price ranges .

Noise-optimized hot air blowers provide uniform baking results and extract expelled moisture. ebm-papst tangential blowers are used both for stove jacket cooling to protect surrounding kitchen furniture and electronics cooling for a long service life.

# Refrigerators

Efficient, reliable and quiet

Our EC and AC axial fans provide best performance for freezers and chest freezers with automatic defrosting as well as food coolers in refrigerators.

Motors for fan applications in freezers and chest freezers are exposed to rough conditions . Low temperatures, high humidity and rapid temperature changes place high demands on our products, which we meet by providing the best quality.

However, the most urgent design objective is to fulfill constantly increasing consumer demands for energy efficiency and noise reduction in technical products.

For this area, ebm-papst has developed very energy-saving and low-noise fans which already have a history of successful use by leading manufacturers.

# Tanning beds, sauna and wellness

Simply feeling your best

An important trend in today's society is the increasing focus on wellness. In professional settings such as swimming pools, wellness facilities and tanning salons, as well as in private settings, ebm-papst fans are currently used in tanning beds, massage beds and saunas.

In these fields, ebm-papst offers fans that are individually and specially matched to the application : axial and centrifugal fans, compact and tangential blowers, in EC or AC technology.

In tanning beds, the fans are used to cool both the body and the fluorescent tubes. This application demands reliable and energy-saving products.

In saunas and massage beds, too, ebm-papst fans provide the necessary air movement, thereby ensuring a genuine feeling of well-being.

**ebmpapst**

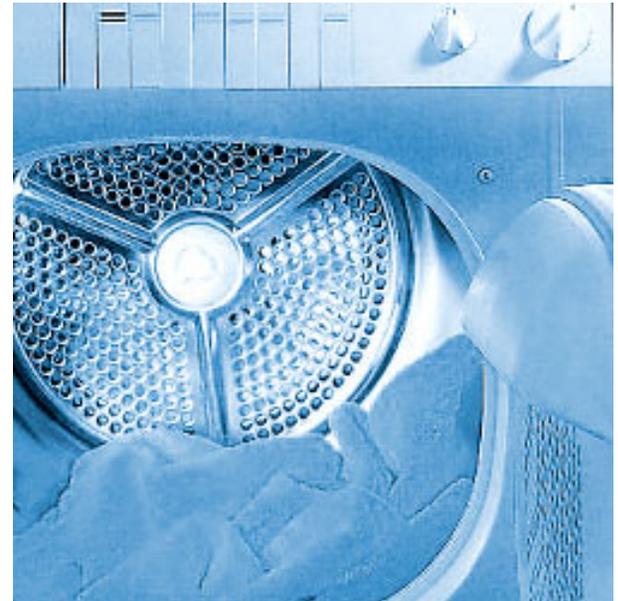

# Clothes dryers

## Profit from energy-saving products

Clothes dryers have become an indispensable part of today's household. State-of-the-art technology dries clothes quickly and efficiently.

ebm-papst provides condensate pumps for the growing condensation dryer market. Especially for this application, we have developed intelligent pumps that optimize the pumping process with an integrated float switch.

Because a clothes dryer should work as quietly as possible, the optimally tuned hydraulics also provide perfect noise behavior.
